

Mahmoud Morshedy

Project & Program Coordinator | CRO / Experimentation Delivery

Cairo, Egypt | +201098255187 | morshedy3008@gmail.com | [linkedin.com/in/morshedy](https://www.linkedin.com/in/morshedy)

PROFILE

Detail-driven coordinator with a track record of taking projects from concept through build, launch, and analysis. Background in BI development and IT operations at PwC, managing recurring cross-functional deliverables and serving as the go-to point of contact translating technical progress into clear, confident updates. Organized and over-communicative by default — comfortable owning a roadmap of concurrent workstreams while keeping people focused and moving.

CORE STRENGTHS

- **Coordination:** Manages multiple concurrent workstreams and cross-functional stakeholders, spotting risks early and unblocking progress before deadlines slip.
- **Strategy & Planning:** Builds and maintains structured roadmaps and reporting systems; communicates the "why" behind a plan to technical and non-technical audiences alike.
- **Client & Stakeholder Communication:** Defaults to proactive over-communication — status updates, early risk flags, and clear, positive framing that keeps teams motivated.
- **Fast Learner, High Agency:** Self-taught across BI, data, and automation tools; consistently ships side projects outside formal scope (see Selected Projects).

PROFESSIONAL EXPERIENCE

BI Developer & IT Operations Analyst Associate

Feb, 2025 – Present

PwC ETIC Middle East | Cairo, Egypt

- Own end-to-end delivery of two anchor reporting programs (see Selected Projects) — coordinating requirements, build, testing, and rollout across IT and business stakeholders as single point of contact.
- Maintain a running pipeline of dashboard and reporting requests, prioritizing and sequencing work so nothing is missed and stakeholders always know current status.
- Run recurring stakeholder check-ins to walk through progress, flag blockers early, and reset expectations before small issues become deadline risks.

IS&T Support Engineer

Oct, 2023 – Jan, 2025

PGESCOT | Cairo, Egypt

- Coordinated resolution of L1/L2 hardware, software, and network incidents across a multi-site organization, following ITIL best practices and consistently hitting SLA targets.
- Owned the IT asset lifecycle end-to-end — procurement intake, inventory tracking, and decommissioning — for a multi-site organization.
- Administered the Microsoft 365 environment (provisioning, licensing, SharePoint permissions, Exchange), serving as point of contact for access issues across teams.
- Built a knowledge base of resolved incidents and SOPs, cutting repeat escalations and speeding up onboarding for new engineers.

SELECTED PROJECTS

NYC Citibike 2019 Trip-Data Analytics — Full-Cycle Project

Aug, 2026

- Owned a project end-to-end through the same idea → build → launch → analysis arc this role is built around: scoped the question, engineered a Python data pipeline across multiple raw data sources, built out analysis and a two-page Power BI dashboard, then packaged findings into a stakeholder-ready presentation.
- Built and documented the workflow for a non-technical audience (walkthrough docs, clean visuals, plain-language takeaways), mirroring the kind of client-facing readout this role requires weekly.

Service Desk Ticketing Analytics System

Mar, 2026

- Partnered with the service desk team to turn raw ticketing data into a reporting system tracking volume, resolution time, and recurring issue patterns — acting as primary point of contact between the team and stakeholders throughout.

IT Asset Management Dashboard

Nov, 2025

- Coordinated with IT stakeholders to define tracking requirements, then built and launched a live monitoring dashboard consolidating hardware asset status, lifecycle, and location into one source of truth.

EDUCATION

B.Sc., Information Engineering and Technology

2023

German University in Cairo (GUC)

CERTIFICATIONS

- ITIL 5 Foundation
- Microsoft PL-300 (Power BI Data Analyst)
